12. Risk assessment
13. Useful links

1. Introduction

An allergy is a reaction of the body's immune system to substances that are usually harmless. The reaction can cause minor symptoms such as itching, sneezing or rashes, but sometimes causes a much more severe reaction called anaphylaxis.

Anaphylaxis is a serious, life-threatening allergic reaction. The whole body is affected often within minutes of exposure to the allergen, but sometimes it can be hours later. Causes can include foods, insect stings and drugs.

Most healthcare professionals consider an allergic reaction to be anaphylaxis when it involves difficulty breathing or affects the heart rhythm or blood pressure. Anaphylaxis symptoms are often referred to as the ABC symptoms - (Airway, Breathing, Circulation).

It is possible to be allergic to anything which contains protein. However, most people will react to a small group of potent allergens.

Common UK Allergens include (but are not limited to):

Peanuts, tree nuts, sesame, milk, egg, fish, latex, insect venom, pollen and animal dander.

This policy sets out how Falla Park Community Primary School will support pupils with allergies, to ensure they are safe and are not disadvantaged in any way whilst taking part in school life.

2. Role and Responsibilities

Parent Responsibilities

- On entry to the school, it is the parent's responsibility to inform the office staff and the class teacher of any allergies. This information should include all previous serious allergic reactions, history of anaphylaxis and details of all prescribed medication
- Parents are to supply a copy of their child's **Allergy Action Plan** (BSACI plans) to school. If they do not currently have an Allergy Action Plan this should be developed as soon as possible in collaboration with a healthcare professional e.g. School nurse/GP/allergy specialist
- Parents are responsible for ensuring any required medication is supplied, in date and replaced as necessary
- Parents are requested to keep the school up to date with any changes in allergy management. The Allergy Action Plan will be kept updated accordingly

Staff Responsibilities

- All staff will complete allergen and anaphylaxis training. Training is provided for all staff on a yearly basis and on an ad-hoc basis for any new members of staff
- Staff (regular or cover classes) must be aware of the pupils in their care who have

known allergies as an allergic reaction could occur at any time and not just at mealtimes. Any food-related activities must be supervised with due caution
- In Early Years children must always be within sight and hearing of a member of staff while eating. Where possible staff should sit facing children whilst they eat so they can prevent food sharing and be aware of any unexpected allergic reactions
- In Early Years the class teacher and teaching assistants is responsible for checking that food and snacks being provided meets all the requirements for each child
- Staff leading school visits will ensure they carry all relevant emergency supplies. Visit leaders will check that all pupils with medical conditions, including allergies, carry their medication. Pupils unable to produce their required medication will not be able to attend the visit
- The SENDCo will ensure that the up-to-date Allergy Action Plan is kept with the pupil's medication
- It is the parent's responsibility to ensure all medication is in date. However, the office staff will check medication kept at school on a termly basis and send a reminder to parents if medication is approaching expiry
- The office staff keeps a register of pupils who have been prescribed an adrenaline auto-injector (AAI) and a record of use of any AAI(s) and emergency treatment given.
- The office staff ensures that any reaction or near misses is recorded and reported internally

Pupil Responsibilities

- Pupils are encouraged to have a good awareness of their symptoms and to let an adult know as soon as they suspect they are having an allergic reaction
- Pupils who are trained and confident to administer their own AAIs will be encouraged to take responsibility for this

3. Allergy Action Plans

Allergy action plans are designed to function as individual healthcare plans for children with food allergies, providing medical and parental consent for schools to administer medicines in the event of an allergic reaction, including consent to administer a spare adrenaline auto-injector.

British Society of Allergy and Clinical Immunology (BSACI) Allergy Action Plans are produced by a medical professional and should not be created by school. These are a national plan that has been agreed by the BSACI, Anaphylaxis UK and Allergy UK. The allergy action plans are designed to function as an individual healthcare plan.

4. Emergency Treatment and Management of Anaphylaxis

What to look for:

Symptoms usually come on quickly, within minutes of exposure to the allergen.

Mild to moderate allergic reaction symptoms may include:

- A raised rash (known as hives or urticaria) anywhere on the body

- A tingling or itchy feeling in the mouth
- Swelling of lips, face or eyes
- Stomach pain or vomiting

More serious symptoms are often referred to as the ABC symptoms and can include:

- AIRWAY - swelling in the throat, tongue or upper airways (tightening of the throat, hoarse voice, difficulty swallowing)
- BREATHING - sudden onset wheezing, breathing difficulty, noisy breathing
- CIRCULATION - dizziness, feeling faint, sudden sleepiness, tiredness, confusion, pale clammy skin, loss of consciousnes

The term for this more severe reaction is anaphylaxis. In extreme cases there could be a dramatic fall in blood pressure. The person may become weak and floppy and may have a sense of something terrible happening. This may lead to collapse and unconsciousness and, on rare occasions, can be fatal.

If the pupil has been exposed to something they are known to be allergic to, then it is more likely to be an anaphylactic reaction.

Anaphylaxis can develop very rapidly, so a treatment is needed that works rapidly. **Adrenaline** is the mainstay of treatment, and it starts to work within seconds.

What does adrenaline do?

- It opens up the airways
- It stops swelling
- It raises the blood pressure

As soon as anaphylaxis is suspected, adrenaline must be administered without delay. Action:

- Keep the child where they are, call for help and do not leave them unattended
- **LIE CHILD FLAT WITH LEGS RAISED** – they can be propped up if struggling to breathe but this should be for as short a time as possible
- **USE ADRENALINE AUTO-INJECTOR WITHOUT DELAY** and note the time given. AAIs should be given into the muscle in the outer thigh. Specific instructions vary by brand – always follow the instructions on the device
- CALL **999** and state **ANAPHYLAXIS (ana-fil-axis)**
- If no improvement after 5 minutes, administer second AAI
- If no signs of life commence CPR
- Call parent/carer as soon as possible

Whilst you are waiting for the ambulance, keep the child where they are. Do not stand them up, or sit them in a chair, even if they are feeling better. This could lower their blood pressure drastically, causing their heart to stop.

All pupils must go to hospital for observation after anaphylaxis, even if they appear to have recovered as a reaction can re-occur after treatment.

5. Supply, Storage and Care of Medication

Depending on their level of understanding and competence, pupils will be encouraged to take responsibility for their condition.

For younger children or those not ready to take responsibility for their own medication, there should be an anaphylaxis kit which is **kept within 5 minutes of them**, not locked away and **accessible to all staff.**

Medication should be stored in a suitable container and clearly labelled with the pupil's name. The pupil's medication storage container should contain:

- Two AAIs i.e. EpiPen® or Jext®
- An up-to-date allergy action plan
- Antihistamine as tablets or syrup (if included on allergy action plan)
- Spoon if required
- Asthma inhaler (if included on allergy action plan)

It is the responsibility of the child's parents to ensure that the anaphylaxis kit is up-to-date and clearly labelled, however the office staff will check medication kept at school on a termly basis and send a reminder to parents if medication is approaching expiry.

Parents can subscribe to expiry alerts for the relevant AAIs their child is prescribed, to make sure they can get replacement devices in good time.

Older Children and Medication

Older children and teenagers should, whenever possible, assume responsibility for their emergency kit under the guidance of their parents. However, symptoms of anaphylaxis can come on **very suddenly**, so school staff need to be prepared to administer medication if the young person cannot.

Storage

AAIs should be stored at room temperature, protected from direct sunlight and temperature extremes.

Disposal

AAIs are single use only and must be disposed of as sharps. Used AAIs can be given to ambulance paramedics on arrival or can be disposed of in a pre-ordered sharps bin. Sharps bins to be obtained from and disposed of by a **clinical waste contractor.** The sharps bin is kept in the school office.

6. 'Spare' Adrenaline Auto-Injectors in School

Falla Park Community Primary School has purchased spare **AAIs for emergency use in children who are risk of anaphylaxis,** but their own devices are not available or not working (e.g. because they are out of date) or are experiencing anaphylaxis for the first time.

These are stored in a green anaphylaxis case mounted on the wall, clearly labelled 'Emergency Anaphylaxis Adrenaline Pen', kept safely, not locked away and **accessible and known to all staff.**

Falla Park Community Primary School holds 6 spare pens which are kept in the following locations:

Head Teacher's Office (4 pens – suitable for Nursery upwards)
Nursery Kitchen (2 pens – suitable for Nursery to Year 2)

The First Aider is responsible for checking the spare medication is in date on a monthly basis and to replace as needed.

Written parental permission for use of the spare AAIs is included in the pupil's allergy action plan.

7. Staff Training

The named staff members (at least 2) responsible for coordinating staff anaphylaxis training and the upkeep of the school's anaphylaxis policy are:

Beverley Edgar, School Business Manager
Vanessa Carr, Head Teacher

All staff will complete Natasha's Law, Allergy School Allergen and anaphylaxis training annually and on an ad-hoc basis during induction of new staff.

Training includes:

- Knowing the common allergens and triggers of allergies
- Spotting the signs and symptoms of an allergic reaction and anaphylaxis. Early recognition of symptoms is key, including knowing when to call for emergency services
- Administering emergency treatment (including AAIs) in the event of anaphylaxis knowing how and when to administer the medication/device
- Measures to reduce the risk of a child having an allergic reaction e.g. allergen avoidance, knowing who is responsible for what
- Managing allergy action plans and ensuring these are up to date

Falla Park Community Primary School ensures that staff undertake a practical session using trainer devices (these can be obtained from the manufacturers' websites: www.epipen.co.uk and www.jext.co.uk)

8. Inclusion and Safeguarding

Falla Park Community Primary School is committed to ensuring that all children with medical conditions, including allergies, in terms of both physical and mental health, are properly supported in school so that they can play a full and active role in school life, remain healthy and achieve their academic potential.

9. Catering

All food businesses (including school caterers) must follow the Food Information Regulations 2014 which states that allergen information relating to the 'Top 14' allergens must be available for all food products.

The school's menu is available for parents to view in advance with all allergens highlighted on the organisation website at https://www.fallapark.gateshead.sch.uk/ In addition the full matrix is available in the individual school kitchens.

The parents will inform the school of pupils with food allergies, school will issue parents with a medical diet application for and medical diet form. The parent will return the completed medical application form and medical diet form to school supported with relevant copy of a medical note from a qualified medical professional such as a GP, dietitian, NHS nurse or other NHS professionals (private laboratory results and homeopathic diagnosis will not be accepted).

School will forward the completed forms, along with medical evidence to the School Catering team at SchoolCateringAllergens@gateshead.gov.uk

If a special menu is required for the pupils this will be developed by the School Catering team and forwarded to school to pass onto parents to make a selection for a three-week menu that will be followed throughout the year. The selected menu is returned to the catering team by school at SchoolCateringAllergens@gateshead.gov.uk. The selected menu will be transferred to the medical diet menu template. The kitchen will then be provided with the medical form with current picture of the pupil attached and a copy of the selected menu, these will be kept in the allergen folder in the kitchen for reference.

Pupils are taken to the service counter and lunchtime supervisors identify them to the kitchen staff by name. They are then served their meal on purple crockery on a tray.

Parents/carers can be directed to the School Catering Team to discuss their child needs if they wish.

All medical diet forms for pupils must be updated annually by parents and a new up to date picture added prior to the new academic year, any special diets will then be created.

The school adheres to the following Department of Health guidance and safer eating as set out in the Early Years Safeguarding document:

- Bottles, other drinks and lunch boxes provided by parents for pupils with food allergies should be clearly labelled with the name of the child for whom they are intended
- If food is purchased from tuck shop, parents should check the appropriateness of foods by speaking directly to the catering manager
- The pupil should be taught to also check with catering staff, before purchasing food or selecting their lunch choice. Children should be encouraged to ask is this safe for me?
- Where food is provided by the school, staff should be educated about how to read labels for food allergens and instructed about measures to prevent cross contamination during the handling, preparation and serving of food. Examples include: preparing food for children with food allergies first; careful cleaning (using warm soapy water) of food preparation areas and utensils.
- Food should not be given to primary school age food-allergic children without parental engagement and permission (e.g. birthday parties, food treats)
- Use of food in crafts, cooking classes, science experiments and special events (e.g. fetes, assemblies, cultural events) needs to be considered and may need to be restricted/risk assessed depending on the allergies of particular children and their age
- At each mealtime and snack time the class teacher and teaching assistants must be clear about who is responsible for checking that the food being provided meets all the requirements for each child
- Children must always be within sight and hearing of a member of staff whilst eating. Where possible, staff will sit facing children whilst they eat so they can make sure children are prevented from food sharing and can be aware of any unexpected allergic reactions

School Trips

Staff leading school trips will ensure they carry all relevant emergency supplies. Visit leaders will check that all pupils with medical conditions, including allergies, carry their medication. Pupils unable to produce their required medication will not be able to attend the excursion.

It is strongly advised that spare adrenaline auto-injectors are carried during school trips to cover the exceptional circumstances that someone has an anaphylactic reaction for the first time or in case of issues with the person's own auto-injector.

All the activities on the school trip will be risk assessed to see if they pose a threat to allergic pupils and alternative activities planned to ensure inclusion.

Overnight school trips should be possible with careful planning and a meeting for parents with the lead member of staff planning the trip should be arranged. Staff at the venue for an overnight school trip should be briefed early on that an allergic child is attending and will need appropriate food (if provided by the venue).

Sporting Excursions

Allergic children should have every opportunity to attend sports trips to other schools.

The school will ensure that the P.E. teacher/s are fully aware of the situation. The school being visited will be notified that a member of the team has an allergy when arranging the fixture. A member of staff trained in administering adrenaline will accompany the team. If another school feels that they are not equipped to cater for any food-allergic child, the school will arrange for the child to take alternative/their own food.

Most parents are keen that their children should be included in the full life of the school where possible, and the school will need their co-operation with any special arrangements required.

Provision of Packed Lunches from the School Kitchen

Where packed lunches are required from the kitchen for school trips, these must be ordered at least 48 hours in advance by completing the packed lunch request form from the kitchen. This will ensure all pupils with allergens are catered for and their packed lunch is clearly labelled and kept separate.

10. Allergy Awareness and Nut Bans

Falla Park Community Primary School supports the approach advocated by Anaphylaxis UK towards nut bans/nut free schools. They would not necessarily support a blanket ban on any particular allergen in any establishment, including in schools. This is because nuts are only one of many allergens that could affect pupils, and no school could guarantee a truly allergen free environment for a child living with food allergy. They advocate instead for schools to adopt a culture of allergy awareness and education.

A 'whole school awareness of allergies' is a much better approach, as it ensures teachers, pupils and all other staff are aware of what allergies are, the importance of avoiding the
pupils' allergens, the signs & symptoms, how to deal with allergic reactions and to ensure policies and procedures are in place to minimise risk.

A wide variety of educational resources are available through Natasha's Foundation Allergy School, including a curriculum map, lesson plans, assembly packs, posters, additional resources and videos.

11. Risk Assessment

Falla Park Community Primary School will conduct a detailed individual risk assessment for all new joining pupils with allergies and any pupils newly diagnosed, to help identify any gaps in our systems and processes for keeping allergic children safe.

School and individual risk assessments can be downloaded for free from: https://www.anaphylaxis.org.uk/downloads-form/safer-schools-download/.
